

SaltLegal Profile

Secure Messaging

Send private real-time messages and group messages to colleagues or clients in relation to specific legal matters.

Secure Conferencing

We offer secure one-to-one calls and conferencing allowing up to 16 participants at any one time.

In-App Restrictions

Administrators can restrict the capability of users to take screenshots within the app.

Closed Contacts

Organisations can manage the communication channels within their company. They control who speaks to who as user's contacts aren't linked to their personal device.

SaltDNA have been building secure enterprise mobile communications solutions since 2013.

Our product provides secure voice, messaging, conference calling and image transfer for busy lawyers, who need to make important decisions while on the move.

Mobile communications present major privacy challenges for the legal industry. Client-attorney privileged discussions, mergers/acquisitions details and legal strategy are just a few examples of mobile communications that have been intercepted and reported on in the news.

In 2016, 48 elite law firms suffered cyber hacks to their security systems, which was reportedly due to the use of consumer applications and online services used for communications and sharing legal documentation. The consequences in cases such as this is significant for a law firm and its clients.
